

TPP Conflict Minerals Compliance

Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act requires compliance from all public companies listed with the Securities and Exchange Commission (SEC). Although the manufacturing sector is most directly impacted, many other industries fall under the scope of the requirements including: aerospace, automotive, retail, jewelry, medical device manufacturing, and defense.

TPP Can Help

TPP provides clients with comprehensive data content services and reporting tools to demonstrate due diligence in accordance with recognized standards. Our experienced data technicians collect, verify, and assess full materials disclosure data that can be leveraged by clients to support their conflict minerals compliance due diligence.

Our Approach

Supplier Contact

TPP data technicians work directly with suppliers to ensure that the supplier understands the requirements and provides information to fulfill due diligence requirements.

Data Management

With the web-based Compliance Management Module users can quickly access data and filter components that contain 3TG and download the corresponding supplier documentation, all in one central location.

Data Collection

Data is compiled to the homogenous level for all components and is strictly verified for accuracy. Supplier inquiries are developed using the Conflict Minerals Reporting Template (CMRT). TPP routinely refreshes data and documentation to stay up to date on the latest standards and product data changes.

Reporting Tools

Bundle and download CMRTs, Full Material Disclosures (FMDs), and supplier declarations. Create custom reporting formats to satisfy specific customer requirements and export in multiple formats for integrations with your existing enterprise software.

Comprehensive Coverage

TPP data content services are available to help source information from suppliers to close data gaps and address the nuances of company-specific needs. Comprehensive solutions from TPP can address a wide range of challenges - from initial reporting obligations to integration and continued compliance data management.
